Case#: 37741

SDG#: F2X15

The EPA Region 6 Environmental Services Branch ESAT data review team has completed a review of the submitted Contract Laboratory Program (CLP) data package for the referenced site. The samples analyzed and reviewed are detailed in the attached Regional data review report.

The data package is acceptable for regional use. Problems, if any, are listed in the report narrative.

If you have any questions regarding the data review report, please contact me at (281) 983-2140.

Attached is the data review summary for Case # 37741
SDG # F2X15
Site Martine Springs-Slaughter Creek GWP

COMMENTS:

I. LEVEL OF DATA REVIEW

Standard review was performed for this data package.

II. CONTRACTUAL ASSESSMENT OF THE DATA PACKAGE

The CCS and hardcopy review found the data package contractually compliant.

III. TECHNICAL USABILITY ASSESSMENT OF THE DATA PACKAGE

The total number of sample results reviewed for this data package was 970. Some results were qualified because of the significant technical problem addressed below.

BNA sample F2X23 had a low SDMC2 recovery.

NOTABLE PERFORMANCE:

**COMMENTS/CLARIFICATIONS
REGION 6 CLP QA REVIEW**

CASE 37741 **SDG** F2X15 **SITE** Martine Springs-Slaughter Creek **GWP** **LAB** KAP

COMMENTS: This SDG consisted of ten water samples for BNA, PEST, and ARO analyses following CLP SOW SOM01.2. The OTR/COC Records designated sample F2X21 as the laboratory QC sample, but one bottle was broken upon receipt. The MS/MSD analyses were performed on sample F2X21 for pesticide and aroclor fractions and sample F2X16 for the BNA fraction.

Standard review was performed for this data package as requested by the TDF. The only target compound detected at a concentration above the CRQL was bis(2-ethylhexyl)phthalate in BNA sample F2X17. BNA sample F2X23 had a low SDMC2 recovery.

Some results were qualified for BNA sample F2X23 because of a DMC performance problem. ESAT's final data qualifiers in the Data Summary Table (DST) indicate the technical usability of all reported results. An Evidence Audit was conducted for the Complete Sample Delivery Group File (CSF), and the audit results were reported on the Evidence Inventory Checklist.

NOTE: THE FOLLOWING REVIEW NARRATIVE ADDRESSES BOTH CONTRACTUAL ISSUES (BASED ON THE STATEMENT OF WORK) AND TECHNICAL ISSUES (BASED ON THE NATIONAL FUNCTIONAL GUIDELINES). THE ASSESSMENT MADE FOR EACH QC PARAMETER IS SOLELY BASED ON THE TECHNICAL DATA USABILITY, WHICH MAY NOT NECESSARILY BE AFFECTED BY CONTRACTUAL PROBLEMS. THE ASSESSMENTS ARE DEFINED BELOW.

Acceptable = No results were qualified for any problem associated with this QC parameter.

Provisional = Some results were qualified because of problems associated with this QC parameter.

Unusable = All results are unusable because of major problems associated with this QC parameter.

1. **Holding Times:** Acceptable. All samples met contractual and technical holding time criteria.

2. **Tuning/Performance:** Acceptable. The DFTPP analyses met GC/MS tuning criteria. PEST and ARO analyses met instrument performance requirements.

3. **Calibrations:** Acceptable. All analytes met contractual and technical calibration criteria.

4. **Blanks:** Acceptable. All laboratory blanks met contractual requirements. The laboratory reported several pesticides at concentrations far below the CRQL's for one instrument blank, but none of the contaminants was detected in the associated field samples.

5. Deuterated Monitoring Compounds (DMC's)/Surrogates: Provisional. All samples met contractual criteria for DMC/surrogate recoveries. Although contractually acceptable, BNA samples F2X19 and F2X23 had up to two DMC recoveries outside the QC limits. The reviewer qualified as estimated results for bis(2-chloroethyl)ether, 2,2'-oxybis(1-chloropropane), and bis(2-chloroethoxy)methane for BNA sample F2X23 because of a low SDMC2 recovery. The high recoveries for SDMC7 and SDMC10 for BNA sample F2X19 did not affect the sample results because the compounds associated with these DMC's were not detected in the sample.

6. Matrix Spike/Matrix Spike Duplicate/Laboratory Control Sample (MS/MSD/LCS): Acceptable. The LCS results were within the QC limits for the PEST and ARO fractions. The following MS/MSD results exceeded the QC limits:

the MS/MSD recoveries for 4-nitrophenol,
the MSD recovery for 2,4-dinitrotoluene, and
the RPD for AR1016 (on one column).

Since none of the compounds listed above was detected in the unspiked sample, result qualification was not required. All other MS/MSD results met QC criteria for precision and %recovery.

7. Other QC: Not Applicable.

8. Internal Standards (IS): Acceptable. IS performance was acceptable for all BNA analyses.

9. Compound Identity (ID)/Quantitation: Acceptable. The only target compound detected at a concentration above the CRQL was bis(2-ethylhexyl)phthalate in BNA sample F2X17. The analyst may have reported false positive results for one instrument blank, but this problem did not affect the field sample data usability. No other compound ID or quantitation problem was detected.

10. Performance/Completeness: Acceptable. The data package was complete. The laboratory was contacted regarding two reporting issues (see Resubmission Request). The laboratory response is not expected to affect the DST.

11. Overall Assessment: Results are acceptable for nine BNA samples, all PEST samples, and all ARO samples. Some results were qualified for BNA sample F2X23 because of a DMC performance problem.

ORGANIC DATA QUALIFIER DEFINITIONS

The following definitions provide brief explanations of the ESAT-Region 6 qualifiers assigned to results in the Data Summary Table.

- U Not detected at reported quantitation limit.
- N Identification is tentative.
- J Estimated value.
- L Reported concentration is below the CRQL.
- M Reported concentration should be used as a raised quantitation limit because of interferences and/or laboratory contamination.
- R Unusable.
- ^ High biased. Actual concentration may be lower than the concentration reported.
- v Low biased. Actual concentration may be higher than the concentration reported.
- F+ A false positive exists.
- F- A false negative exists.
- UJ Estimated quantitation limit.
- T Identification is questionable because of absence of other commonly coexisting pesticides.
- C Identification of pesticide or aroclor has been confirmed by Gas Chromatography/Mass Spectrometer (GC/MS).
- X Identification of pesticide or aroclor could not be confirmed by GC/MS when attempted.
- * Result not recommended for use because of associated QA/QC performance inferior to that from other analysis.

CSF Deliverables PEST

Summary of Questions/Issues:

CSF Deliverables

Forms DC-1: The airbill numbers were incorrectly reported for samples F2X18, F2X19, and F2X23. Please correct and resubmit pages 703, 704, and 705.

PEST

PIBLK11: Results were reported for many target compounds on Forms 1 (pages 458 and 459), but the quantitation information was omitted on the quantitation report (page 460). Please make the necessary correction and/or resubmission at this time.

NOTE: Any laboratory resubmission should be submitted either as an addendum to the original CSF with a revised Form DC-2 or submitted as a new CSF with a new Form DC-2 except for replacement pages (SOM01.1, B-33, 2.6.3). Custody seals are required for all such shipments.

Please respond to the above items **within 7 days** by e-mail to El-Feky.Mahmoud@epa.gov and by regular mail to:
